FIND OUT MORE Call 1.800.513.2957

This four-day class is designed to provide Universal Automation Centre (UAC) schedulers with the knowledge and skills need to understand, navigate and work in a production environment.

Providing a broad overview of the features of Stonebranch UAC, this class explores the tools available for monitoring and managing the active environment, including all jobs and workflows for an enterprise. Interactive labs and hands-on exercises are woven into the learning experience to enhance and reinforce key learning areas of job scheduling.

Our methodology has evolved over years of practical experience delivering workload automation training. Students successfully completing this class will leave with the skills and knowledge needed to immediately apply their knowledge in the workplace. At the end of this class students will be able to confidently build, implement, troubleshoot and manage daily business operations.

STONEBRANCH UAC SCHEDULING CLASS OUTLINE
